

VARNICOMP SR

COMPRESSIBLE UNDERPACKINGS FOR THE BEST QUALITY COATING

GENERAL PROPERTIES

VARNICOMP SR is the compressible underpacking now becoming the standard on the varnishing unit of printing presses to increase the quality in coating. The product replaces the compressible layer built in the offset blankets.

VARNICOMP SR helps to obtain the best Kiss-print effect, minimise ink build up and reduce the cylinders noise whilst running on coating unit and above all to obtain a better coating quality.

VARNICOMP SR the product with 40° Shore A hardness is made by a special elastomer, rendered compressible by a design of deep and picks areas, it has a very good resilience, elastic response and very long period of life.

VARNICOMP SR is available self- adhesive A type and non- adhesive in the following thicknesses in grey-white colour: 1.00 - 1.30 - 1.45 - 1.95 - 2.10 mm

VARNICOMP PLUS is a self- adhesive A type and non-adhesive available only in the thicknesses 0.64 mm and have yellow-white colour.

Innovative compressibility system has higher resilience and consequently a longer life; the compressibility curve is uniform during working life.

VARNICOMP SR does not lack of thickness due to the smash of the closed cells of the compressible layer in the standard blankets and remains uniformed during the working life of the product.

VARNICOMP SR/PLUS have compressible layer which reduces the cylinders noise and vibration during the run, obtaining the best results in coating transfer at high run speed.

VARNICOMP SR/PLUS acts as cylinder pressure absorber either on coating transfer on the plate or coating transfer on paper/cardboard.

The basic anti slip polyurethane layers of **VARNICOMP SR** and **PLUS** are designed not to slip or move under the plate and the self-adhesive **VARNICOMP A** is guaranteed to remain in place for the long working life of the plate giving a better adhesion on.

The specific adhesive used in the **VARNICOMP** types has the great advantage of being easy to remove at the end of the working life.

VARNICOMP underpackings are sold for exclusive use with **VARNIPLATE - VARNIBLUE** coating plates by **KRUSE**.

VARNICOMP PLUS

AVAILABLE ONLY IN 0.64 MM THICKNESS
